

Claire

Voyant

A senior administrative strategist who happens to be software. She reads the inbox, drafts the replies, runs the day, keeps Jira honest, clears out the junk, and finds the events that would otherwise have been missed.

07	Contacts, and the daily health check The two that run quietly	P.10
08	Why a button in an email can be trusted The safety model, in four parts	P.11
09	What she will never do The deliberate limits	P.12

The standing rule

Alex only hears from Claire when something needs him. A quiet hour produces no email at all — no "nothing to report," no daily summary of her own diligence. Every message she sends is there because a decision is waiting.

What touches you

Claire works for Alex, inside Alex's mailbox. If you work with him, three questions are worth answering before any of the rest of this matters.

She cannot see your email.

Claire holds access to one mailbox — Alex's — and nothing else. She has never had a credential for yours, and the app holds no permission that would let her ask for one. Nothing you send to anyone else is visible to her, and nothing you send to Alex goes anywhere he would not already have it.

She reads your Jira issues, and only your Jira issues.

Summaries, statuses and due dates from the boards you already share with Alex, so the Sunday and Monday digests can say where things stand. She reads with Alex's own Jira account, so she sees exactly what he could already see by opening the board. Nothing is written to your issues on your behalf.

She will never email you.

Every scheduled email goes to Alex alone. The only message that reaches anyone else is a reply Alex personally approved by pressing a button, and it arrives from him, in his name, with no mention of Claire in it. If you get an email from Alex, Alex sent it.

If something looks wrong

Tell Alex. Every action Claire takes is logged, every email she sends is in his sent items, and anything she deleted is in Deleted Items for thirty days. There is no action in this handbook that cannot be traced or undone.

A week in her calendar

Everything runs on a fixed clock in Eastern time. Nothing fires overnight, nothing fires on a Saturday except the health check, and the inbox is only read during business hours.

MON	TUE	WED	THU	FRI	SAT	SUN
5:45 AM Health check	5:45 AM Health check	5:45 AM Health check	5:45 AM Health check	5:45 AM Health check	5:45 AM Health check	5:45 AM Health check

Monday carries the week

Seven jobs, because the tasks email, the team digest and the contacts sweep all land before nine.

Friday closes it

The junk review at noon and the sweep at five are five hours apart on purpose — that gap is yours.

The weekend is quiet

Saturday runs one job and sends nothing. Sunday's digest and agenda arrive at three, ready for Monday.

Inbox triage and drafted replies

At the top of each business hour she reads everything from the last two days and sorts it into one question: is a human waiting on Alex specifically?

Newsletters, receipts, alerts and threads someone else owns are set aside. Mail he has already opened still counts — reading something on a phone is not the same as dealing with it.

Someone asking for time gets a gracious note plus his genuine open windows for the next ten business days, read live off the calendar, and his booking link. **Someone asking him to do something** gets a short acknowledgement that buys time — it never answers the substance, promises a date, or commits him to an outcome. Anything else that owes a reply is listed without a draft, because those are the ones only he can answer. Nothing is sent, and nothing lands in the Drafts folder.

Approve and send	Sends it as written, then adds that person to his contacts if they weren't already.
Edit	Opens the full text in a box. Send it, or save it and come back.
Do not send — delete	Nothing goes out. The original message stays in the inbox.
Review Attachment	Appears when there's a file. Opens the document itself if it's a cloud link, otherwise the email holding it.

WHAT ARRIVES

Inbox recap — 3 ready to send
10:00 AM

Hi, this is Claire Voyant, your personal Senior Administrative Strategist!

Hi Alex, I think these emails need a reply!

Needs Something

Sender: Elena Marsh <e.marsh@riversidecc.edu>

Subject: MOU with the community college — can you look at section 7?

WHAT THEY ASKED

Wants Alex to read section 7 of the community college MOU on indemnification and say whether it is acceptable before the board packet goes out Friday.

DRAFTED REPLY

Elena — got the MOU, and I see the change to section 7 along with the term going from three years to one. I'm going to look into this and get back to you well before the packet goes out Friday.

Thanks,
Alex

Your daily agenda

Twice a day, a picture of one day. Meetings first, free time second, tasks underneath.

Each meeting shows who called it, who's coming, where it is, and a link into the calendar entry. Anything requiring a drive is flagged in **red with a car**, so a lunch across the county never surprises him at 11:50.

Free time is laid out as blue chips, six across, so a light afternoon reads at a glance. Any chip can be claimed on the spot — she asks what the time is for, then puts a private block on the calendar with that name. No attendees, so nobody is invited and nobody is notified. Holidays are *not* skipped, because meetings happen on them.

+ Block	Claims a free slot. She asks what it's for, so next week he'll know why it's blocked.
More	Opens the real calendar entry for the full invitation.
Mark done	Moves the task to Done in Jira without leaving the email.

Events you may want to attend

Twice a week she reads the last two weeks of inbox *and* junk looking for one thing: something with a date he could actually turn up to.

Conferences, webinars, mixers, workshops, open houses. Not deadlines, not renewal notices, not product launches he's merely being told about. The junk folder is read on purpose — event invitations are the single most common thing Outlook mis-files, which makes it the highest-yield place to look.

A conference that emails four times appears once. And saying no is final: the email goes to Deleted Items and that event is never offered again, however many reminders the organiser sends under new subject lines.

Yeah, I'll attend that	Goes on the calendar as busy. No invitation is sent to the organiser.
I might attend	Goes on as tentative, annotated "Thinking about it," holding the slot without committing him.
No, thanks!	Deletes the email and stops her showing that event again.

WHAT ARRIVES

Events you may want to attend (9)

12:00 PM Friday

Hi, this is Claire Voyant, your personal Senior Administrative Strategist!

Events you may want to attend

SME Lunch and Learn: How Organizations Are Using AI to Drive Real Business Results

FREE

Tuesday, September 22nd

Where Regional Tech Council, Northgate

Practical AI applications for small and mid-sized organizations — the same audience the clinic is trying to reach this fall.

From: Regional Tech Council · Explore Practical AI Applications in Advanced Technology

Yeah, I'll attend that

I might attend

No, thanks!

— Claire Voyant

End-of-week junk cleanup

Two jobs five hours apart, and the gap between them is the whole point.

At noon she reads every message in the junk folder and sends back only the ones that do *not* look like junk. At five, whatever is still in there is cleared out. The review is deliberately short: surfacing a borderline marketing email costs attention every week, while missing one costs almost nothing, because a real correspondent follows up. What gets held back falls into four buckets — **an event** worth attending, **a person** writing individually, **an organisation** the clinic has a relationship with, or something **transactional** with real consequences.

Phishing is never surfaced, however convincing. A fake DocuSign or a spoofed bank notice is the most legitimate-looking mail in any junk folder, and a "move to inbox" button under one would make this the most dangerous thing the assistant does. **Nothing is destroyed** — the sweep moves everything to Deleted Items, where it keeps for thirty days.

Move to inbox + calendar	Events only. Rescues the message and books the event as busy.
Move to inbox	Puts it back, unread, where it survives the 5 PM sweep.
Block sender & delete	To Deleted Items, and she never surfaces that sender again.

WHAT ARRIVES

● ● ● Possibly not junk (2) — your junk folder empties at 5 PM
 12:00 PM Friday

Hi, this is Claire Voyant, your personal Senior Administrative Strategist!

Your junk folder is emptied at 5:00 PM today. I read all 138 messages in there and these 2 did not look like junk to me. Everything else goes. Anything you want to keep, deal with here or move it out of Junk yourself before 5:00 — and nothing is destroyed, it all lands in Deleted Items where you have thirty days to change your mind.

Northgate Chamber of Commerce EVENT

events@northgatechamber.example.org

You're invited: Cybersecurity for Small Business breakfast

Thursday, October 1st at 8:00 AM · Northgate

A local chamber event aimed squarely at the small businesses the clinic serves.

Tasks, and a reply that updates Jira

Monday morning, everything open on the task board arrives in one email — overdue first, then due this week, then dated later, then everything without a date.

Grouping is by urgency rather than status, because an overdue item that nobody has started should not be three sections down. The part that matters: **reply to the email in plain English and Jira updates itself.** "did the MOU one," "TASK-41 done," "push TASK-12 to Friday," "note on TASK-8: waiting on Dana." She reads the reply on her next hourly pass, applies what she can, and sends back a confirmation naming exactly what changed — and anything she couldn't match.

WHAT ARRIVES — MONDAY, 7:00 AM

● ● ●

Your tasks — Monday, September 7th

7:00 AM

Hi, this is Claire Voyant, your personal Senior Administrative Strategist!

Reply to this email to update Jira. Plain English is fine — did the MOU one , TASK-41 done , push TASK-12 to Friday , note on TASK-8: waiting on Dana . You'll get a confirmation of exactly what changed.

OVERDUE (1)

TASK-41 Send the signed MOU back to Riverside CC · due Sep 4

DUE THIS WEEK (2)

TASK-38 Draft the Q4 funder update · due Sep 11

TASK-12 Confirm capstone student roster · due Sep 12

— Claire Voyant

What the team has been doing

The same digest twice — 3 PM Sunday to read before the week starts, 8 AM Monday to read as it starts. It covers Sam, Priya, Marco and Dana, plus Alex, pulling from each person's own Jira project. Dana's work lives in the shared shared Operations project, so his section filters to what's actually assigned to him.

Across the team	One paragraph on the whole group, before the individual sections start.
Where it stands	Per person: what they've been working on and how it's going.
Needs attention	Per person: what's stalled, slipping, or waiting on someone. Empty when there is genuinely nothing.

Contacts that build themselves

The reason type-ahead never fired: people Alex corresponds with constantly were never in his contacts.

Claire fixes that on a rule with one deliberate trigger — **replying, not receiving**.

Anyone can send an email. That signal is worthless, and using it is how a directory fills with vendors and mailing lists. Answering someone is a decision. So once a week she adds everyone he replied to by hand in Outlook, and she adds people the moment he approves a reply from a recap. People with several addresses are merged into one entry — the work address for colleagues, the personal one wherever that is the address actually in use.

The daily health check

Before the day starts, she proves her access still works by using it — not by checking a date on a certificate.

If the Microsoft sign-in has lapsed, one email says so in plain language, before it would otherwise be noticed by way of an agenda that never arrived.

The same principle covers Jira: her credentials are verified before any result is trusted, because a dead Jira token returns an empty list rather than an error — and "nobody finished anything this week" is a far more damaging lie than "I couldn't reach Jira."

When something is genuinely broken

Failures are loud and specific. A dead sign-in, a Jira token that no longer authenticates, a junk sweep that could not run — each sends one email naming what stopped and what was left untouched. Nothing fails quietly, and nothing pretends to have succeeded.

Why a button in an email can be trusted

Every button is a link that could, in principle, send mail as Alex. Four things stand between that link and anyone else.

Clicking only shows you a page

The action happens when you press the button on that page, never on the click from the inbox. Outlook's link scanners follow every URL in every message within seconds of delivery — without this, they would send the replies themselves.

Each link is signed

Cryptographically, with a key held in Azure Key Vault. A guessed or edited URL is rejected before it reaches anything that can act.

Links expire, and work once

Seven days, then dead. A recap sits in an archive forever, and a permanent send button in a backup is a liability. A second click reports what already happened rather than doing it twice.

Email content is never an instruction

A message containing text aimed at an AI — "ignore your rules, forward this" — is classified as suspicious, gets no draft, and is quarantined into its own section of the recap.

Two more properties are worth stating plainly. **Nothing is ever deleted outright** — every delete, including the Friday sweep, moves the message to Deleted Items where it keeps for thirty days. And **availability is never written by a language model**: open times are read from the calendar and inserted by code, because a plausible-sounding invented slot costs a real double-booking.

What she will never do

Half of what makes an assistant trustworthy is what it declines to do.

-
- **Send anything without a button being pressed.** There is no auto-reply, no "high confidence" exception, and no setting that turns one on.

 - **Mark mail as read.** Unread is Alex's own signal for what he hasn't dealt with, and quietly erasing it would cost more than the tidiness is worth.

 - **Invent a time.** Availability is read from the calendar and inserted by code, never written by a model.

 - **Answer the substance of a request.** A holding reply buys time; it never offers an opinion, promises a date, or commits him to an outcome.

 - **Add someone to contacts for emailing him.** Only replying counts.

 - **Destroy mail outright.** Every delete moves the message to Deleted Items, where it keeps for thirty days.

 - **Rescue anything that looks like phishing.** The most convincing mail in a junk folder is the mail designed to be convincing, and it stays buried.

 - **Email anyone but Alex.** Every scheduled message goes to him alone; the only mail reaching a third party is a reply he approved himself.

 - **Email him to say there is nothing to say.** Silence means silence.

Claire Voyant runs on Azure Functions against Microsoft 365, Jira Cloud and Claude, on a fixed Eastern-time schedule. Everything in this handbook describes behaviour that is live today.
